### **DETAILED ACTION**

1. The amendment filed July 16, 2003 has been entered.

#### ***Claim Rejections - 35 USC § 112***

2. Claim 28 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 28, line 2, structural cooperation is lacking for “reel”, particularly with respect to the housing.

#### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 16-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Granger, pn 4,635,837 (hereafter Granger ‘837), in view of Fleischauer, pn 3,961,700.

Granger ‘837 discloses an apparatus with almost every structural limitation of the claimed invention as best understood from the claims including a shaft (e.g., 38) but lacks the shaft

Art Unit: 3724

having a configuration wherein the length of the central section is greater than the width of the at least one groove. However, the Examiner takes Official notice that such a shaft configuration is old and well known in the art as evidenced by Fleischauer (e.g., 58 in Fig. 2, or 66 in Fig. 3A) and provides well known benefits including providing an effective interface between a drive belt and a shaft for maintaining the belt in position on the dolly axle portion of the shaft. A further known benefit of such a shaft configuration is that it provides a groove with arcuate rather than square surfaces which reduces undue wear on the belt. Therefore, it would have been obvious to one having ordinary skill in the art to provide the shaft of Granger with the claimed configuration for the well known benefits including those described above.

*Response to Arguments*

5. Applicant's arguments filed April 21 2003 and July 16, 2003 have been fully considered but they are not persuasive.
